

# ***THE POWER OF A FLUSH!***

Using *CALPHLEX*  
to combat Sodium stress.

<b>Untreated</b>				<b>Treated</b>			
<b>GREEN 14</b>	<b>July</b>	<b>Nov</b>	<b>%Change</b>	<b>GREEN 15</b>	<b>July</b>	<b>Nov</b>	<b>%Change</b>
Sodium (meq/L)	1.38	2.91	+111 %	Sodium	2.84	2.42	- 15 %
Conductivity	0.45	0.91	+ 102 %	Conductivity	0.46	0.70	+ 52 %
Soluble Salts	0.12	0.2	+ 67 %	Soluble Salts	0.15	0.17	+ 13 %
Potassium (meq/L)	0.65	1.05	+ 62 %	Potassium (meq/L)	0.5	0.99	+ 98 %

This course relies on poor quality reclaimed water for irrigation.

The above was accomplished with 3 applications of Calphlex between July and November 2008.

Comparing the Untreated vs. Treated Greens:

- Reductions in soluble Sodium, Conductivity and Soluble salts were realized as were increases in soluble Potassium.
